

GLASS BRAIDED PACKING V9900

Composition

The glass fiber packing V9900 is braided with E glass yarns.

Characteristics

Glass Braided Packing is produced from various types of yarn and can be supplied in round, square or rectangular section. Braided E-Glass packing is a high strength product with low compressibility and is especially recommended for heavy duty applications. When the packing is coated with graphite, an increase in lubricity results. Braided E-Glass packing is made from texturized, continuous E-Glass fibre filaments up to a maximum of 9 microns. These fibres cause considerably less irritation of the skin than the coarser fibres. Braided E-Glass packing exhibits excellent chemical stability resisting attack from most corrosive agents. Exceptions are hydrofluoric acids and phosphoric acids and concentrated alkalis. No water of hydration is present. Excellent die-electrical strength.

Applications

- Static seals in (steam)boilers and (coke)furnaces
- Seals in heat exchangers
- Seals between filter elements Wrapping of exhausts gases
- Purpose sealing applications

Tech Data

	P bar	lbf/in2	Vm/S	f/pm	pH	T°C	T°F
	5	75			2 ÷ 12	0 ÷ 550	32 ÷ 540 / 1000

- Never use the product to the maximum temperature and pressure associated. Consult the manufacturer for further information
- The peak temperature can be sustained for short exposures

Glass Braided Packing V9900

Braided E-Glass packing exhibits excellent chemical stability resisting attack from most corrosive agents. Exceptions are hydrofluoric acids and phosphoric acids and concentrated alkalis. No water of hydration is present. Excellent die-electrical strength.
