

GRAPHITE PACKING GR48R

Composition

Pure high carbon content flexible graphite yarns reinforced with Inconel™ wire.

Characteristics

The flexible graphite packing GR48R is a versatile and high-performing solution for many industrial applications. Made with expanded graphite yarns with high carbon content and reinforced with Inconel™, it can withstand high temperatures and pressures, as well as multiple industrial fluids and gases, except for highly oxidizing ones. Thanks to its easy cutting and installation, this universal braid is an ideal choice for sealing valves and pipes of all types. Additionally, the GR48R packing is also available in the non-reinforced version GR48, which still offers excellent performance in many industrial applications. With GR48R and GR48, you can ensure maximum safety and reliability for your industrial seals.

Applications

The flexible graphite braid GR48R is specifically designed to ensure perfect sealing on industrial valves of all types, with the ability to use various fluids and gases, excluding only highly oxidizing ones. Thanks to the high carbon content present in the expanded graphite yarns and the nickel-alloy metal reinforcement, this braid guarantees greater resistance and durability over time compared to the non-reinforced version GR48. However, to achieve optimal performance in the case of dynamic seals, it is recommended to use GR48R with the help of anti-extrusion rings. It is important to note that the maximum pressure for use in valves should not exceed 100 bar in the absence of anti-extrusion rings. In any case, the flexible graphite braid GR48R represents an ideal solution for industrial needs that require reliability, resistance, and versatility.

Tech Data

	P bar	lbf/in2	Vm/S	f/pm	pH	T°C	T°F
	300	4500	1	200	0 ÷ 14	-200 ÷ 450 / 650	-330 ÷ 840 / 1200

- Never use the product to the maximum temperature and pressure associated. Consult the manufacturer for further information
- The peak temperature can be sustained for short exposures
- With weakly oxidizing agents and hot air the temperature must be limited to 450 ° C
- With steam and non-oxidizing fluids the temperature must be limited to 650 ° C
- Graphite and carbon cannot be used with oxidizing fluids
- The packing shall be used with wiper anti-extrusion rings with valves over 100 bar

Graphite Packing GR48R

The Carrara graphite gland packing product range includes items made with all available graphite yarns, which, according to ASTM F2191 classification, are Type I—Continuous yarn, Type II—Staple yarn, and Type III—Flexible yarn. All graphite gland packings are protected with passive or active corrosion inhibitors (Grade A—Treated with corrosion inhibitor), although untreated gland packings (Grade B—No corrosion inhibitor) are available on demand. The performer and premium grade product ranges include Class 2 items, while the Industrial grade product range offers Class 1 products. Carrara graphite gland packings are specialized for each application, and a proper selection of the item allows for maximizing the sealing performance while reducing the component management costs.

The information in this publication and otherwise provided to users is based on experience and is provided to the best of our current knowledge. Due to many factors which are beyond our knowledge and control affecting the use of the products, no warranties are given or are to be held implied with respect to such information. The operating limits shown in this publication do not constitute a statement that these values can be applied simultaneously. Do not use the product at the associated maximum temperature and pressure values. The maximum temperature can be sustained for short exposures in particular conditions. Specifications are subject to change without notice.
