

MEGATHERM R PLANIXTM

Composition

- Phlogopite mica impregnated with silicone resin
- Perforated SS316L support sheet

Characteristics

The presence of flogopite mica, silicone resin, and the perforated SS316L metal support make MEGATHERM R an outstanding option for applications requiring superior performance. This gasket sheet offers exceptional thermal resistance, advanced chemical resistance, and superior durability compared to traditional gaskets made of ceramic fiber or similar materials. MEGATHERM R stands out for its ability to maintain performance even in extreme environmental conditions. The perforated SS316L metal support provides a solid structure, while flogopite mica and silicone resin provide flexibility and resistance to external agents.

Applications

Designed for the production of flange gaskets, MEGATHERM R is ideal for situations where the use of graphite gaskets is not possible due to high temperatures or the presence of oxidizing fluids. This sheet offers reliable and long-lasting performance in a wide range of industrial applications, overcoming the limitations of traditional gaskets and ensuring efficient and durable sealing.

Megatherm R Planix™

The Planix Megatherm range includes a complete set of gasketing sheets intended for high temperature services with oxidizing fluids that cannot be handled by graphite gaskets. The products are made both with vermiculite treated with special bio-soluble fibers and with phlogopite mica to offer a wide choice. The sheets without reinforcement are also suitable as an insulating material due to the high dielectric value of the mica.

- Planix Megatherm High
 - Vermiculite reinforced gasketing sheet
- Planix Megatherm R
 - Mica Phlogopite reinforced gasketing sheets
- Planix Megatherm S
 - Mica Phlogopite without reinforcement

Thickness

3/64" ÷ 1/8"
