

ARAMIDIC EGPTFE GL7600K

Composition

Aramid yarns ePTFE yarns with encapsulated graphite and silicone lubricant

Characteristics

The packing style GL7600K is produced with a special braiding process. It is made with and aramid yarns on the corners for improving the resistance to the extrusion and reduce the wear of the sealing, increasing the pressure at which it can be used.

Applications

The compression packing GL7600K is recommended for dynamic applications. Specialized both for the reciprocating and the centrifugal pumps it can also be used successfully on the mixers and the agitators, for all services with industrial fluids compatible with graphite, PTFE and aramidic fibers. The GL7600K packing has shown particular aptitude for sealing slurry too. The gland packing GL7600K is braided with two yarns. This manufacturing technique wants to reinforce the corners of the packing which are, in the dynamic applications, the parts most stressed and subject to wear.

Tech Data

	P bar	lbf/in2	Vm/S	f/pm	рН	Т°С	T°F	
F	250	3750	3	600	3 ÷ 12	-100 ÷ 250	150 - 400	
®	50	750	25	5000			-150 ÷ 480	

- Never use the product at its maximum rated temperature and pressure. Consult the manufacturer for further information.
- The peak temperature can be sustained only for short exposure periods. Flexible graphite and carbon yarns shall not be used with oxidizing fluids

Aramidic egPTFE GL7600K

The family of the PTFE articles include a wide range of braided packings that can cover all applications that require the use of this material. The PTFE yarn is commonly used in gland sealing systems, both in static and dynamic applications, thanks to the properties of this material, which ensures efficient and reliable sealing that can cover almost the entire pH range. The packings are available in both dry and lubricated configuration, in combination with other fibers such as aramid or with a rubber core.
