

SPIRAL WOUND GASKET SWCI

Composition

Type of Spiralwound	
SW	without rings
SWI	with inner ring
SWC	with outer ring
SWCI	with outer and inner rings

Characteristics

The spiral wound gasket must meet compressibility and elasticity requirements to ensure sealing. For this reason, Carrara manufactures spiral wound gaskets using modern machines with controlled winding tension, always providing a product that meets the technical specifications of industry standards. The temperature range of the spiral depends on the thermal resistance of the metals and fillers. Graphite cannot be used with oxidizing fluids.

Temperature Range of the Filler °C	
PTFE	260
GRAPHITE	550
MICA	900
CERAMIC	1000

Applications

Semi-metallic gaskets for pipeline flanges, valve flanges, and equipment.

Spiral Wound Gasket SWCI

Elasticity and Safety: Planisteel SW

The Planisteel SW range of spiral wound gaskets includes all types of sealing gaskets for every flanged joint. The gaskets are manufactured in the dimensions and materials specified by standards or customized according to the application.

The information in this publication, as well as any additional information provided to users, is based on experience and is shared to the best of our current knowledge. However, due to numerous factors beyond our knowledge and control that may affect the use of these products, no warranties are provided or implied regarding this information. The operating limits presented in this publication do not imply that these values can be applied simultaneously. Do not use the product at the maximum temperature and pressure values simultaneously. The maximum temperature is suitable only for short-term exposure under specific conditions. Specifications are subject to change without prior notice. The picture in the DS may not accurately depict the exact color and/or markings of the product.
