

CONTROLLER 3 EVOLUTION OXY BAM APPROVED

Composition

The **Controller 3 Evolution** is comprised of **ZGR80SGR OXY** braided rings, consisting of expanded graphite wires with a dedicated metal reinforcement. This material ensures minimal weight loss even in the most extreme conditions, meeting the stringent requirements of **EN14772** - section 6.7. BAM approved No. 2-28/2015 E for use with both liquid and gaseous oxygen.

Characteristics

The **Controller 3 Evolution** offers a unique combination of strength and durability, with a low friction coefficient ensuring smooth and reliable operation. Its reinforced structure and the quality of the graphite used make it ideal for high-temperature and pressure applications.

Applications

Specifically designed for industrial valves in oxygen service, the **Controller 3 Evolution** is the ideal choice to ensure effective stem sealing in critical environments. It provides superior performance and exceptional durability, making it essential for oxygen-sensitive industrial applications.

Tech Data

Maximum Temperature °C	Maximum Oxygen Pressure bar
up to 60	350
>60 up to 300	220

Never use the product to the maximum temperature and pressure associated. Consult the manufacturer for further information

CONTROLLER 3 0XY Approvals

- AIT over 500°C
- Artificial Aging: 100h at 325°C and 250 Bar
- AIT of aged sample over 500°C
- Gaseous Oxygen Impact at 300°C
- Liquid Oxygen Impact

BAM approved for Oxygen Services

Controller 3 Evolution OXY BAM approved

The **Controller 3 Evolution** is an innovative gland packing designed specifically for industrial valves in oxygen service. Made from high-quality expanded mineral graphite and reinforced with special metal, this product offers reliable and safe performance in oxygen environments.
