SIGRAFLEX® HOCHDRUCK

Multilayer high-strength sealing sheet made from natural graphite with stainless steel foil reinforcement for extreme conditions

SIGRAFLEX HOCHDRUCK is a multilayer high-strength graphite sealing sheet comprising 0.5 mm thick layers of high-purity graphite foil and 0.05 mm thick stainless steel foils. Depending on the sheet thickness required, several layers of graphite and stainless steel foil are joined together in a special adhesive-free process. As a result, the sheets have outstanding mechanical properties. The sealing sheet is impregnated to reduce leakage and improve handling.

SIGRAFLEX HOCHDRUCK allows end users in the process industry to cover almost their entire gasket requirements with a reliable and safe product.

↑ Cross-section

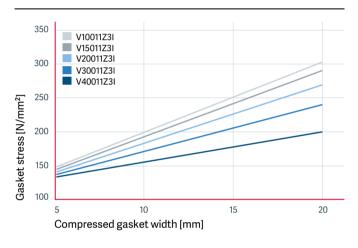

Applications

- For difficult and mechanically highly stressed sealed joints (in tongue-and-groove and flanges with special dimensions, process equipment, heat exchangers, etc.); also suitable for all common pipework and vessel flange designs
- For one-piece gasket designs up to an outside diameter of 1500 mm; for diameters above 1500 mm, for example two-layer structures with segmented sections and staggered joints are recommended
- For operating pressures from vacuum up to 250 bar
- For corrosive media
- Operating temperatures range from –250 °C up to 450 °C depending on chemical resistance, and possibly to 550 °C after consulting the manufacturer. Life time might be limited by actual equipment temperatures and operating conditions. Please refer to our technical guidelines regarding thermal stability.
- Chemical, petrochemical, refinery and nuclear industries
- Steam pipework and boilers in power generation plants
- Heat transfer oils and heating equipment
- Inspection glasses, pumps, fittings and valves
- Existing plants

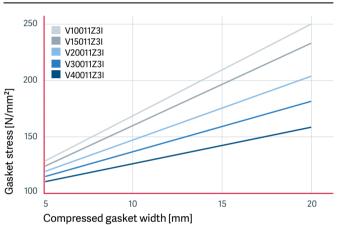

Properties

- Reduction in fugitive emissions due to high leak-tightness
- Outstanding maximum permissible gasket stress
- High operational reliability, increased plant availability
- Excellent oxidation resistance
- Very high blow-out resistance and mechanical strength
- Very high fault tolerance during assembly and operation
- Good chemical resistance
- Long-term stability of compressibility and recovery, even under fluctuating temperatures
- Good scratch resistance and antistick properties due to special impregnation
- No measurable cold or warm flow characteristics up to the maximum permissible gasket stress
- No aging or embrittlement (no adhesives or binders)
- Ease of processing
- Asbestos-free (no associated health risks)

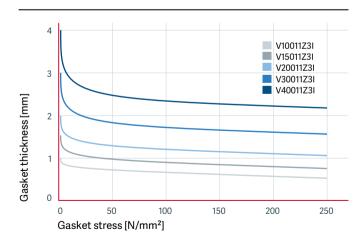

Typical maximum permissible gasket stress of SIGRAFLEX HOCHDRUCK at 20°C

Typical maximum permissible gasket stress of SIGRAFLEX HOCHDRUCK at 300°C

Compressibility of SIGRAFLEX HOCHDRUCK

Approvals/Test reports

- TA Luft (VDI 2440/VDI 2200) with inner eyelets in various designs; for tongue and groove flanges without eyelets
- Fire safe according to BS 6755-2 and API 607
- Blow-out resistance (TÜV at 2.5 times the nominal pressure)
- BAM oxygen
- BAM ethylene oxide/propylene oxide
- Germanischer Lloyd
- US Coastguard
- DVGW (DIN 3535-6)
- TRD 401
- Evaluation for compliance with food Legislation requirements (TÜV Rheinland)
- Hot Relaxation Tightness (HORT)

Assembly instructions

Our detailed assembly instructions are available on request.

The gasket factor conversion formulas $k_0 \times K_0 = \sigma$	$k_0 \times K_D = \sigma_{VU} \times b_D$				
	$k_1 = m \times b_D$				

 Definitions

 $\sigma_{VU/U.0.1}$ Minimum gasket assembly stress needed to comply with leakage class L 0.1 (according to DIN 28090-1)

 Recommended gasket assembly stress: ≥ 20 N/mm² up to σ_{BO}

 Minimum gasket assembly stress in service, where σ_{BU} is the product of internal pressure p_i and gasket factor m for test and in service $(\sigma_{BU} = p_i \times m)$
 σ_{VO} Maximum permissible gasket stress at 20 °C

 $\sigma_{BO \text{ at 300°C}}$ Maximum permissible gasket stress in service

 m
 m = σ_{BU}/p_i

 "m"-factor
 Similar to m, but defined acc. to ASTM, hence different value

Minimum gasket stress in psi

 $\begin{array}{ll} k_{_1} & \text{in mm, factor for gasket stress in service} \\ K_{_D} & \text{in N/mm}^2, \text{max. gasket stress-bearing capacity under} \\ & \text{assembly conditions} \end{array}$

 $\begin{array}{ll} \epsilon_{\text{KRW}} & \text{Compression set under a gasket stress of } 35 \text{ N/mm}^2 \\ \epsilon_{\text{KRW}} & \text{Gasket recovery after reduction in gasket stress from} \\ & 35 \text{ N/mm}^2 \text{ to } 1 \text{ N/mm}^2 \end{array}$

 $\epsilon_{\text{\tiny WSW}}$ Gasket creep compression under a gasket stress of 50 N/mm² at 300 °C after 16 h

 ϵ_{WRW} Recovery after reduction in gasket stress from 50 N/mm² to 1 N/mm²

The percentage changes in thickness of $\epsilon_{\text{KSW}},\,\epsilon_{\text{KRW}},\,\epsilon_{\text{WSW}}$ and ϵ_{WRW} are relative to the initial thickness.

Product overview

Products	Characteristics	Recommended applications
SIGRAFLEX FOIL F/C/E/Z/APX/APX2	Flexible, continuous	–250 °C to approx. 550 °C, for die-formed packing rings, spiral-wound and kammprofile gaskets
SIGRAFLEX STANDARD LCI	Unreinforced, impregnated	Raised-face flanges, enamel or glass flanges, highly corrosive media
SIGRAFLEX ECONOMY VC4	Reinforced with bonded stainless steel foil	Pumps, fittings, gas supply and waste gas pipelines
SIGRAFLEX UNIVERSAL VC2I	Reinforced with tanged stainless steel, impregnated	Pipework and vessels in the chemical and petrochemical industries and in power generation plants
SIGRAFLEX UNIVERSAL PRO VC2I-P	Reinforced with tanged stainless steel, impregnated	TA Luft applications, for pipework and vessels in the chemical and petrochemical industries and in power generation plants
SIGRAFLEX SELECT V16010C3I	Reinforced with stainless steel foil, adhesive-free, impregnated	TA Luft applications, raised-face flanges, pipework in the chemical and petrochemical industries
SIGRAFLEX HOCHDRUCK VZ3I	Multilayer material, reinforced with stainless steel foil, adhesive-free, impregnated	Universal sealing sheet, also for solving sealing problems in pipework, process equipment, tongue-and-groove flanges and non-standard joints in the chemical, petrochemical and nuclear industries and in power generation plants
SIGRAFLEX HOCHDRUCK PRO VZ3I-P	Multilayer material, reinforced with stainless steel foil, adhesive-free, impregnated	Universal sealing sheet for TA Luft applications, also for solving sealing problems in pipework, process equipment, tongue-and-groove flanges and non-standard joints in the chemical, petrochemical and nuclear industries and in power generation plants
SIGRAFLEX APX2 HOCHDRUCK VW3	Multilayer material, reinforced with stainless steel foil, adhesive-free	Universal sealing sheet, also for solving sealing problems in high temperature applications in pipework, process equipment, tongue-and-groove flanges and non-standard joints in the chemical and petrochemical industries and in power generation plants
SIGRAFLEX MF VMF	Adhesive-free laminate made of graphite, stainless steel and PTFE	Maximum requirements for sealability (TA Luft), safety and process hygiene; sealed joints in the chemical, petrochemical, pharmaceutical and food industries
SIGRAFLEX EMAIL VZ3E	Reinforced with stainless steel foil, adhesive-free	PTFE-envelope gaskets for enameled pipework, vessels and stub connections, etc.
